# Reduce the time and labor costs of asset management with Praxair's *Sentry*™ cylinder tracking system

Praxair's five point *Sentry*™ cylinder tracking system can help you do business more efficiently. The *Sentry* system utilizes barcode and scanning technology to automate the tracking and management of cylinders, cylinder clusters and liquid cylinders through production, delivery, cylinder use and return. This helps ensure accurate cylinder balances, deliveries and billing as compared to traditional paper based systems. Cylinders are tracked by serial number so even if a barcode is removed from an asset, traceability is not lost.

The *Sentry* system works whether you have cylinders at just one location, multiple jobsites or multiple locations within a large campus with multiple business units, budgets and delivery points. Praxair's *Sentry* cylinder tracking system can help you keep the most complicated scenarios well managed.

Five Point Tracking Process scans each cylinder as it is...

1. FILLED AT PLANT
2. LOADED FOR DELIVERY
3. DELIVERED
4. PICKED UP
5. RETURNED TO PRAXAIR

Sentry system advantages:

- Increases the accuracy of cylinder balances and rental billing
- Previously lost or stolen cylinders are identified and removed from your cylinder balance upon their return to the system
- Increases the accuracy of cylinder balances among multiple job sites or campus locations
- Easier to conduct physical audits / cylinder counts with more accurate count data. Expedited audit reconciliation and resolution of balance discrepancies.

Speak with your Praxair representative to see if adding the Follow-on tracking functionality is right for your business.
